

## Assisted Listening System Information

This year we are installing a new Assisted Listening System at Campmeeting. This will allow smartphone or tablet users to install an app and listen to services via headphones or Bluetooth enabled devices (hearing aids etc.).

To use this system, simply download the **AudioFetch** app from Google Play or Apple iTunes **before you arrive**.

When you arrive at the tabernacle use your phone to connect to the BloysAudio network (no internet access provided).

Open the **AudioFetch** app and adjust the volume as needed.

If you have any questions please come to the sound booth at the center of the tabernacle.

Also if you have a recently retired smartphone or tablet that you're not using please feel free to download the app and bring it for others who may not have one. Some additional devices will be available for use at the sound booth.

For more information about the system feel free to visit [audiofetch.com](http://audiofetch.com)

Thanks,

Jack Stewart
